Ward or Room Private; Research
 (If research indicate name of Budget)

Name of Doctor (Last) (Surname) (Given Name)

Pertinent Clinical Data RECENTLY Tumor right forearm & wrist
 (On reexaminations give interval history)

SNOP CODED

AUG 25 1977

What Is the Clinical Diagnosis? Osteogenic sarcoma femur & metastases

What Do You Want to Know? Bone survey for metastases

X-Ray Examination of Right chest, single views lateral skull, both upper (Region or system)

X-Ray Treatment for extremitie, left lower extremity, right foot, entire spine (Disease)

Attending Physician Losan

(Do not write below this line)

Date of Report 4-20-46.

ROENTGENOLOGIST'S REPORT

X-Ray No. 25822

BONE SURVEY:

Bone survey again shows the metastases in the upper diaphysis of the left humerus, and another in the neck of the right femur. No other metastases visible.

SKULL:

P-A and lateral films of the skull are probably within normal limits.

Incidentally the right femur, tibia and fibula appear to be in a cast.

C. L. Culd, M. D.
